... more data!

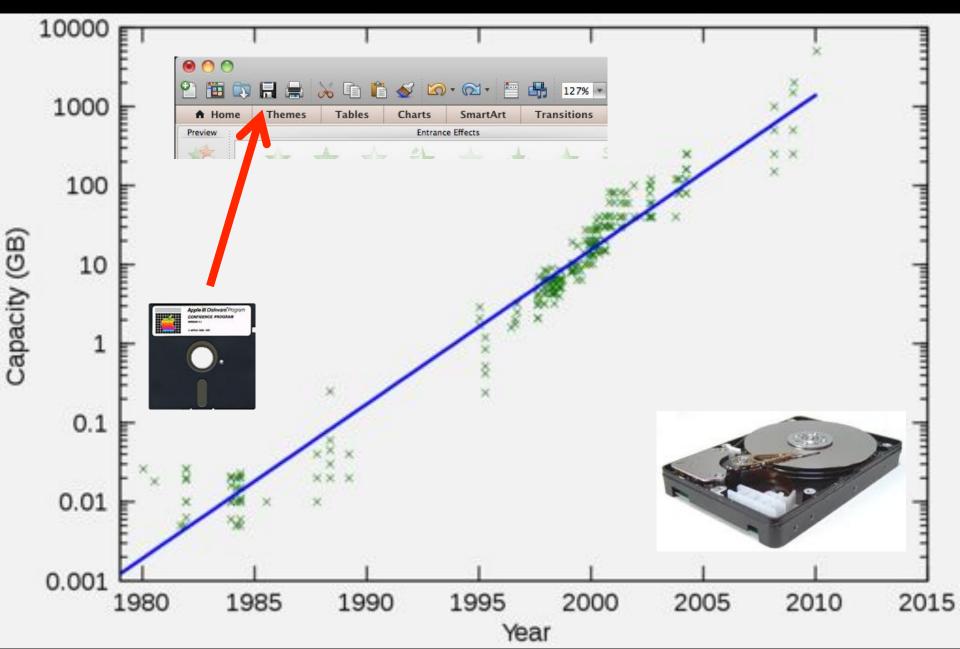

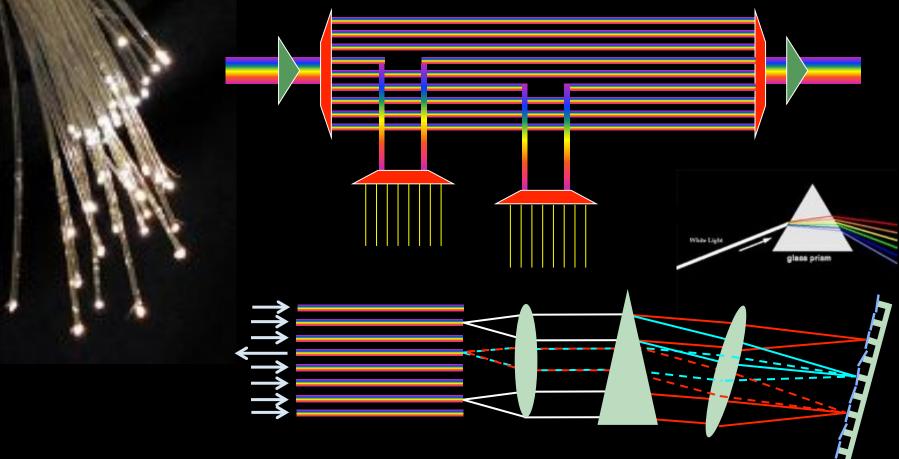

GPU cards are distruptive!

Data storage: doubling every 1.5 year!

Multiple colors / Fiber

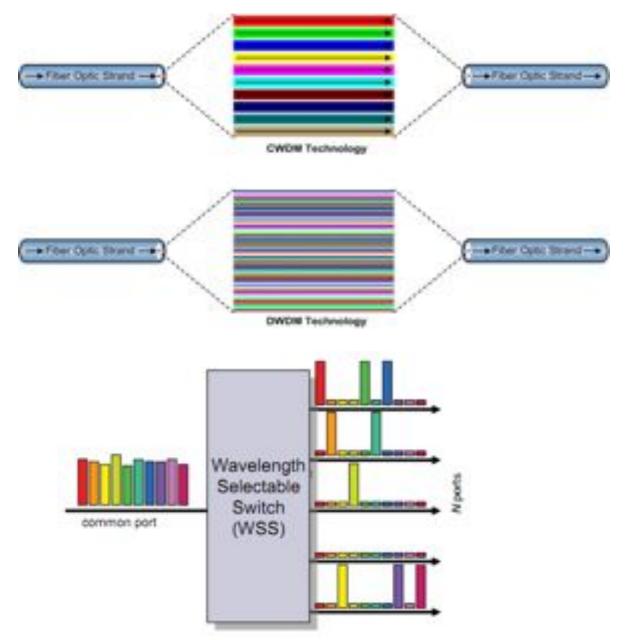

Wavelength Selective Switch

Per fiber: ~ 80-100 colors * 50 GHz Per color: 10 - 40 - 100 Gbit/s BW * Distance ~ 2*10¹⁷ bm/s

New: Hollow Fiber! → less RTT!

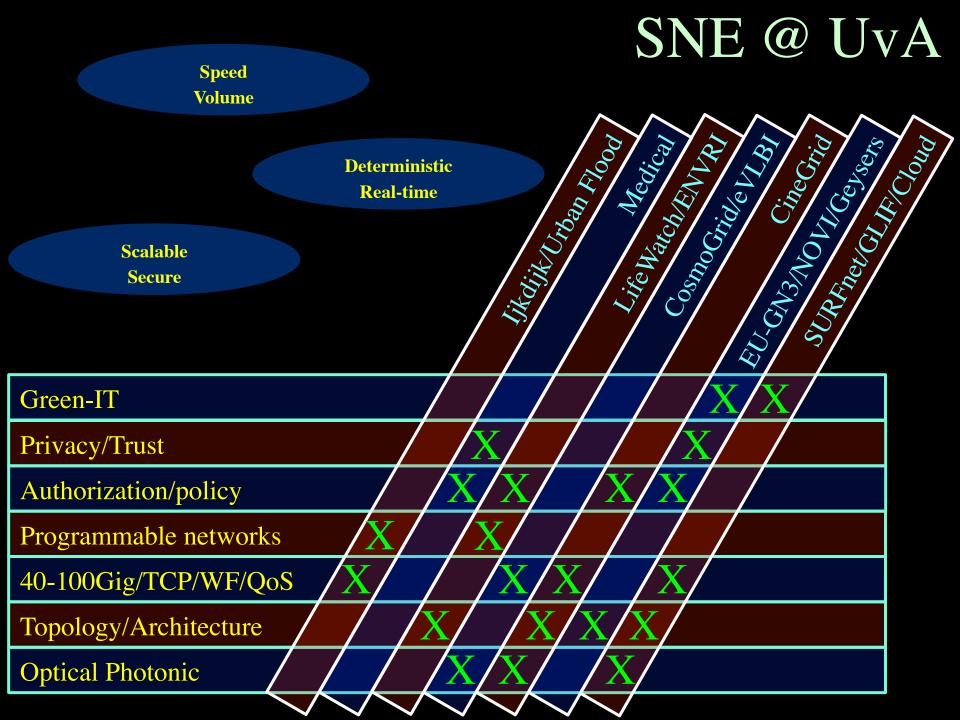

Optical transmission

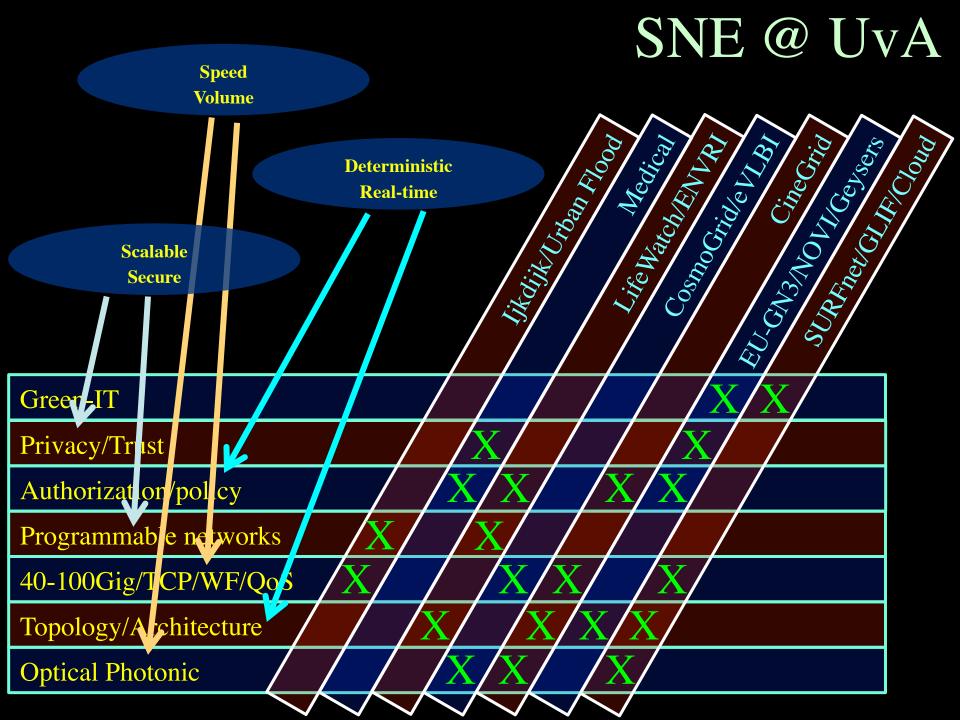

... more possibilities

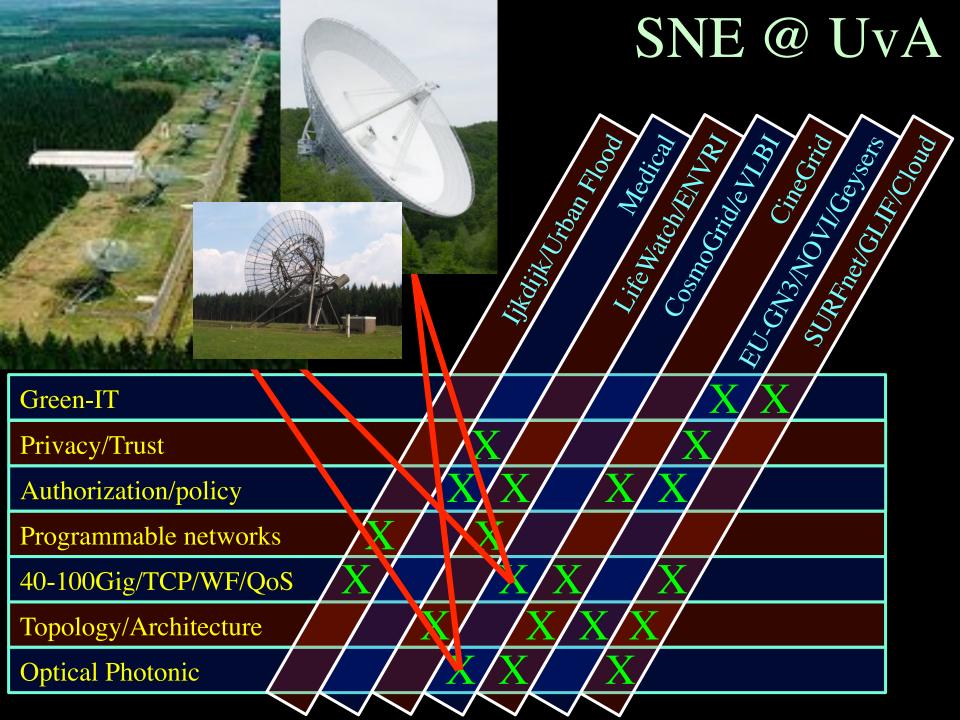

Virtualization

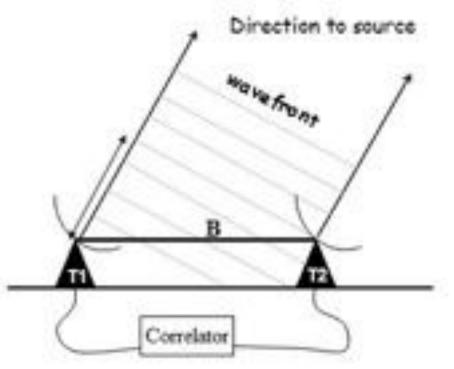

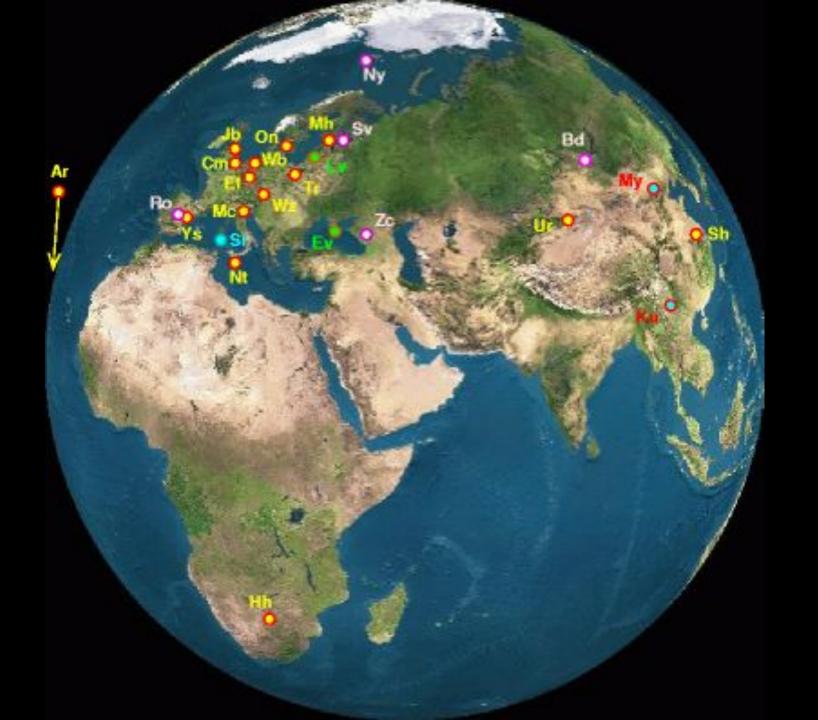

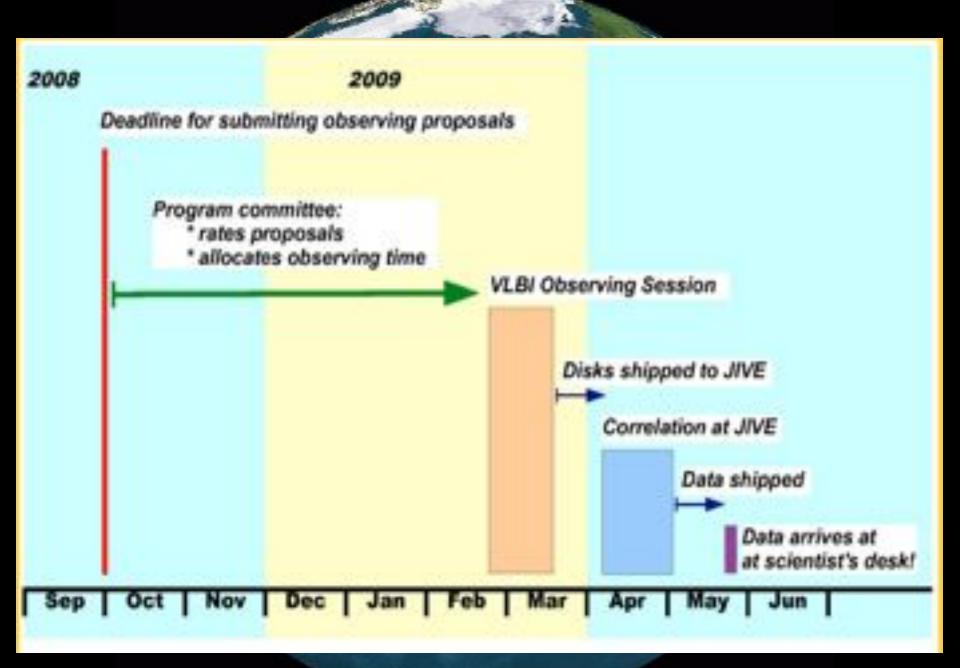

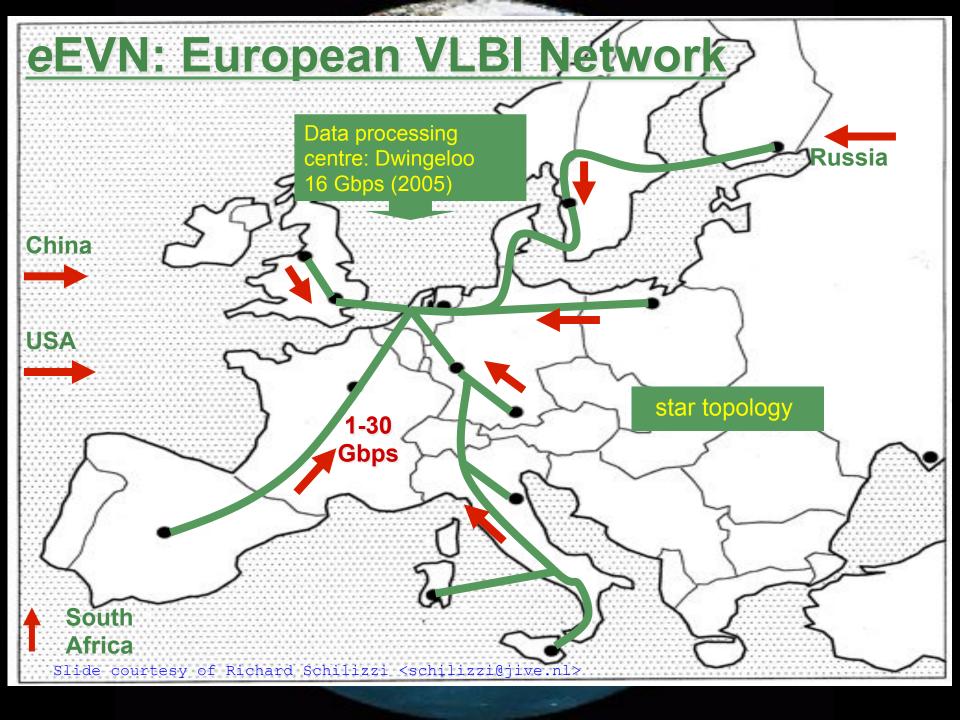

e -Very Large Base Interferometer

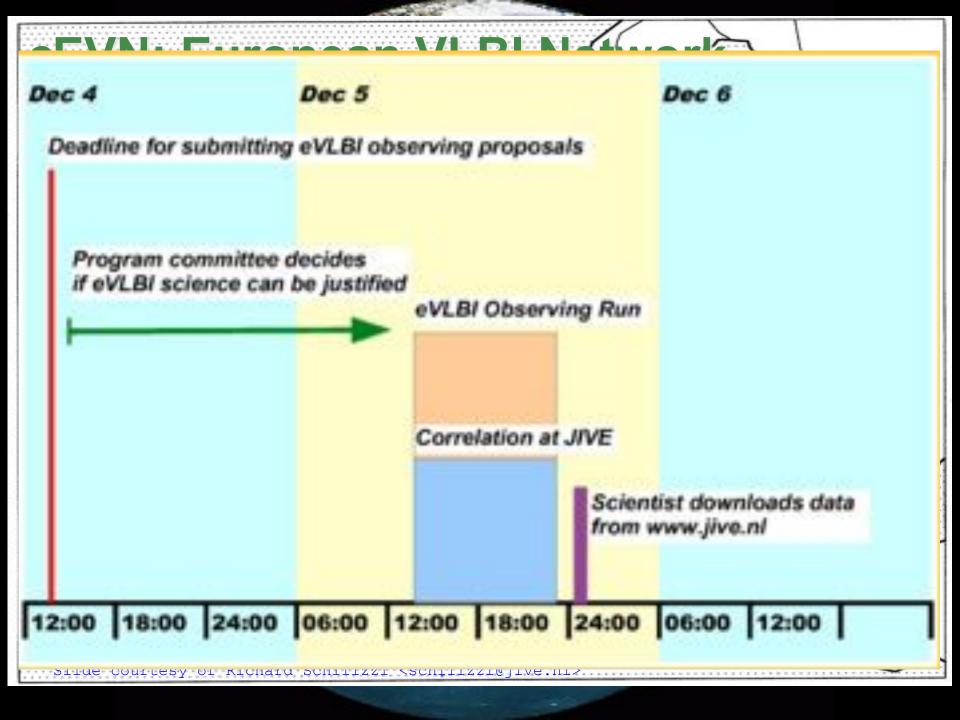

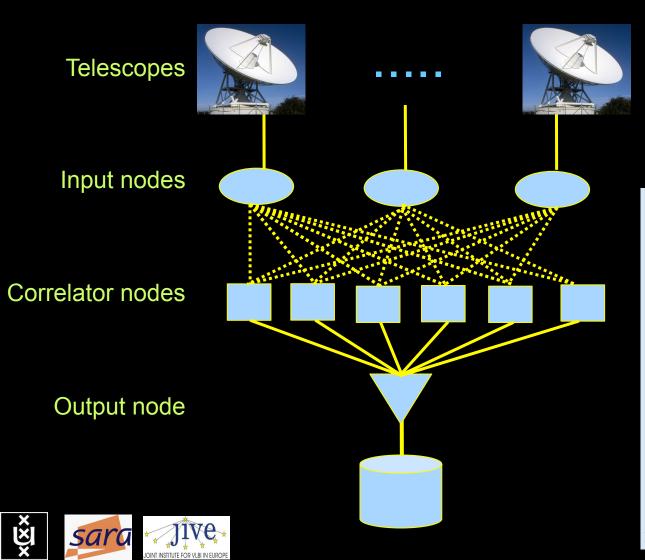

The SCARIe project

SCARIe: a research project to create a Software Correlator for e-VLBI. VLBI Correlation: signal processing technique to get high precision image from spatially distributed radio-telescope.

16 Gbit/s - 2 Tflop → THIS IS A DATA FLOW PROBLEM !!!

Research:

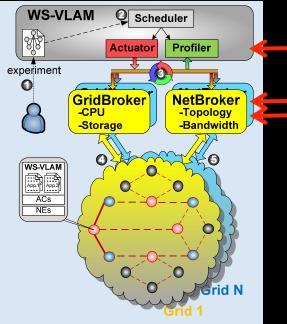

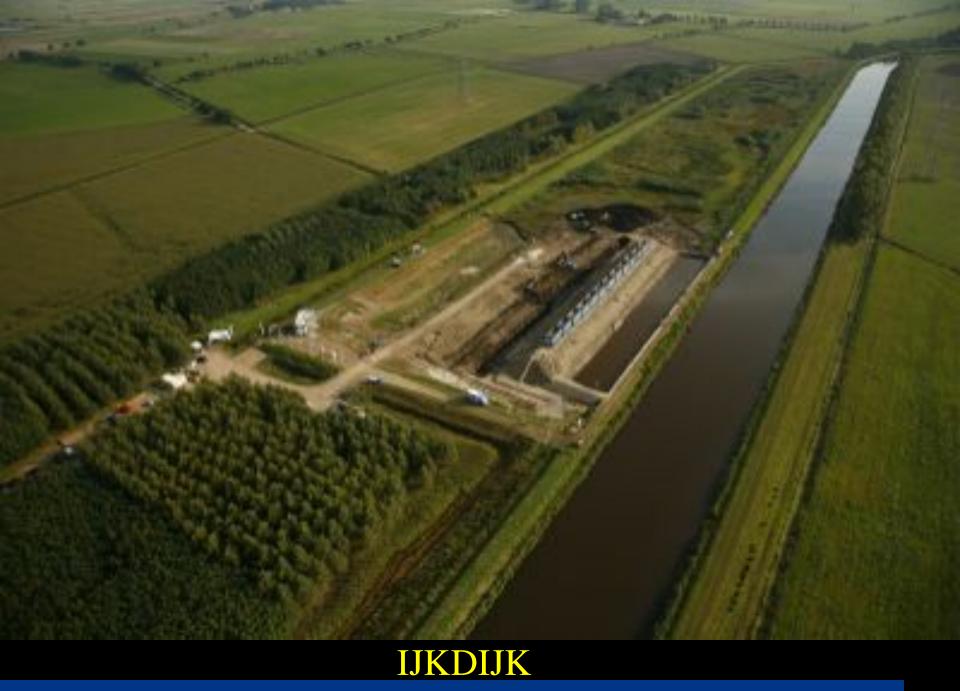

Figure 2. Grid architecture that includes programmable network services.

Sensors: 15000km* 800 bps/m ->12 Gbit/s to cover all Dutch dikes

Sensor grid: instrument the dikes First controlled breach occurred on sept 27th '08:

Many small flows -> 12 Gb/s

Tera-Thinking

- What constitutes a Tb/s network?
- think back to teraflop computing!
 - MPI turns a room full of pc's in a teraflop machine
- massive parallel channels in hosts, NIC's
- TeraApps programming model supported by
 - TFlops -> MPI / Globus / Cloud
 - TBytes -> DAIS / MONETdb ...
 - TPixels –> SAGE

->

– TSensors

– Tbit/s

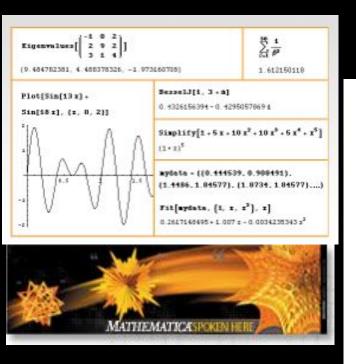

-> LOFAR, LHC, LOOKING, CineGrid, ...

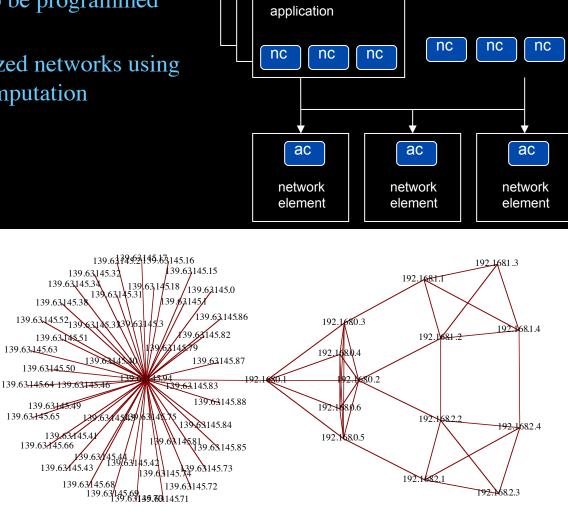

-? -> Programmable Networks

?

User Programmable Virtualized Networks.

- The network is virtualized as a collection of resources
- UPVNs enable network resources to be programmed as part of the application
- Mathematica interacts with virtualized networks using UPVNs and optimize network + computation

ref: Robert J. Meijer, Rudolf J. Strijkers, Leon Gommans, Cees de Laat, User Programmable Virtualiized Networks, accepted for publication to the IEEE e-Science 2006 conference Amsterdam.

PBT is <u>SIMPLE</u> and <u>EFFECTIVE</u> technology to build a shared Media-Ready Network

Alien light From idea to realisation!

40Gb/s alien wavelength transmission via a multi-vendor 10Gb/s DWDM infrastructure

Alien wavelength advantages

- Direct connection of customer equipment^[1]
 → cost savings
- Avoid OEO regeneration → power savings
- Faster time to service^[2] → time savings
- Support of different modulation formats^[3]
 → extend network lifetime

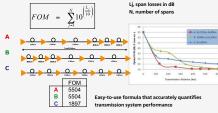

Alien wavelength challenges

- Complex end-to-end optical path engineering in terms of linear (i.e. OSNR, dispersion) and non-linear (FWM, SPM, XPM, Raman) transmission effects for different modulation formats.
- Complex interoperability testing.
- End-to-end monitoring, fault isolation and resolution.
- End-to-end service activation.

In this demonstration we will investigate the performance of a 40Gb/s PM-QPSK alien wavelength installed on a 10Gb/s DWDM infrastructure.

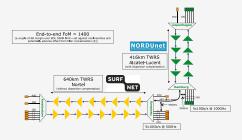

New method to present fiber link quality, FoM (Figure of Merit)

In order to quantify optical link grade, we propose a new method of representing system quality: the FOM (Figure of Merit) for concatenated fiber spans.

Transmission system setup

JOINT SURFnet/NORDUnet 40Gb/s PM-QPSK alien wavelength DEMONSTRATION.

Test results

Error-free transmission for 23 hours, 17 minutes \rightarrow BER < 3.0 $10^{\text{-16}}$

Conclusions

- We have investigated experimentally the all-optical transmission of a 40Gb/s PM-QPSK alien wavelength via a concatenated native and third party DWDM system that both were carrying live 10Gb/s wavelengths.
- The end-to-end transmission system consisted of 1056 km of TWRS (TrueWave Reduced Slope) transmission fiber.
- We demonstrated error-free transmission (i.e. BER below 10-15) during a 23 hour period.
- More detailed system performance analysis will be presented in an upcoming paper.

Total Throughput 46.47 Gbps RTT 44.032 ms

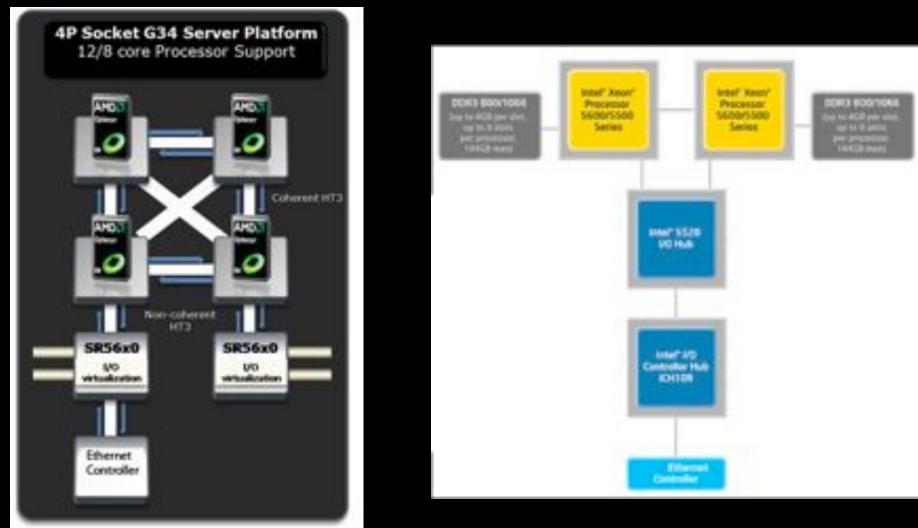

Results (rtt = 17 ms)

- Single flow iPerf 1 core -> 21 Gbps
- Single flow iPerf 1 core <> -> 15+15 Gbps
- Multi flow iPerf 2 cores -> 25 Gbps
- Multi flow iPerf 2 cores <> -> 23+23 Gbps
- DiViNe <> -> 11 Gbps
- Multi flow iPerf + DiVine -> 35 Gbps
- Multi flow iPerf + DiVine $\langle \rangle \rightarrow 35 + 35$ Gbps

Performance Explained

- Mellanox 40GE card is PCI-E 2.0 8x (5GT/s)
- 40Gbit/s raw throughput but
- PCI-E is a network-like protocol
 - 8/10 bit encoding -> 25% overhead -> 32Gbit/s maximum data throughput
 - Routing information
- Extra overhead from IP/Ethernet framing
- Server architecture matters!
 - 4P system performed worse in multithreaded iperf

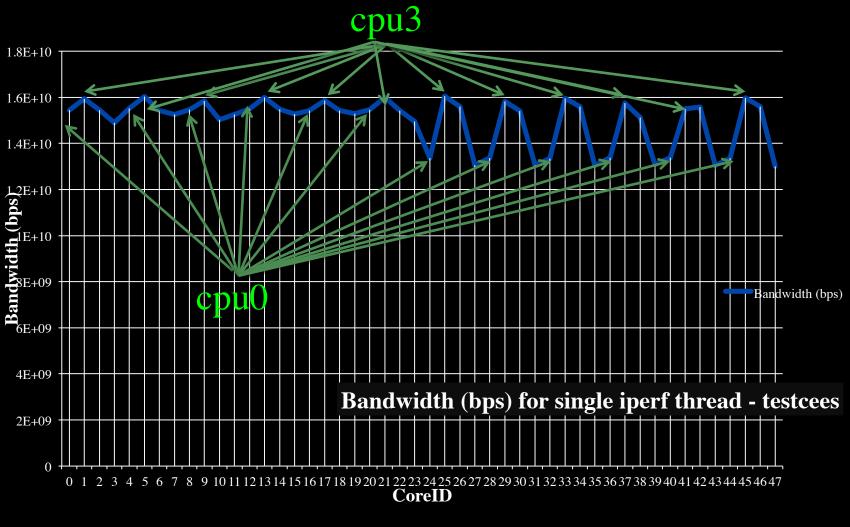

Server Architecture

DELL R815 4 x AMD Opteron 6100

Supermicro X8DTT-HIBQF 2 x Intel Xeon

CPU Topology benchmark

We used numactl to bind iperf to cores

Using ontologies for resource description in the CineGrid Exchange In: Future Generation Computer Systems (2010)

Why is more resolution is better?

- 1. More Resolution Allows Closer Viewing of Larger Image
- 2. Closer Viewing of Larger Image Increases Viewing Angle
- 3. Increased Viewing Angle Produces Stronger Emotional Response

Advanced Image Research Laboratories

Red End Robin Noorda & Bethany de Forest

STEREO 4K Recording Viktoria Mullova Holland Festival 2010

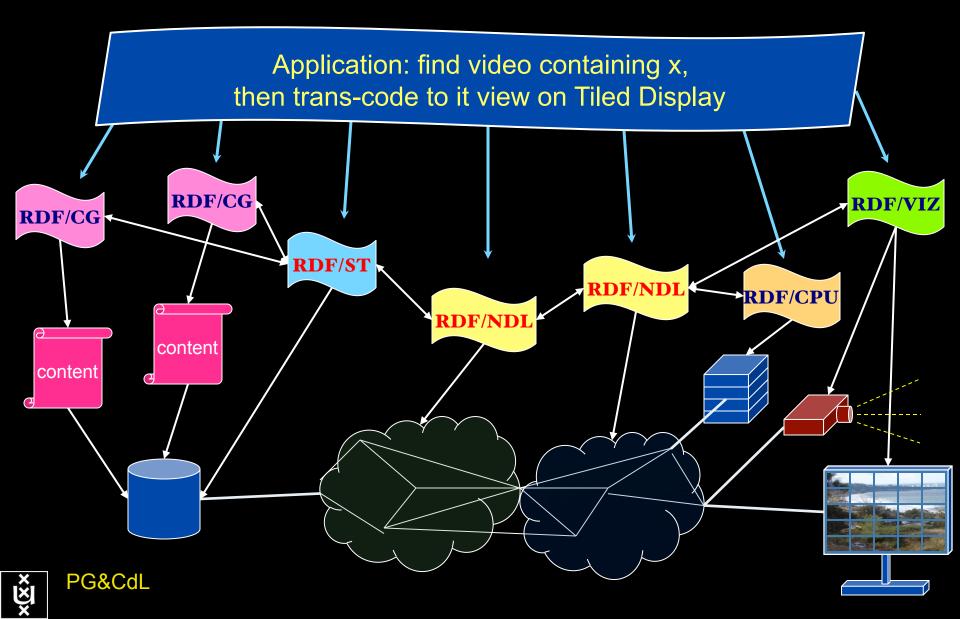

Why?

I want to:

"Show Big Bug Bunny in 4K on my Tiled Display using green Infrastructure"

- Big Bugs Bunny can be on multiple servers on the Internet.
- Movie may need processing / recoding to get to 4K for Tiled Display.
- Needs deterministic Green infrastructure for Quality of Experience.
- Consumer / Scientist does not want to know the underlying details.
 His refrigerator also just works.

RDF describing Infrastructure

Applications and Networks become aware of each other!

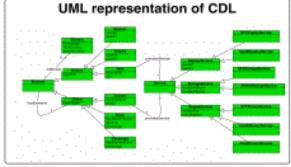

CineGrid Description Language

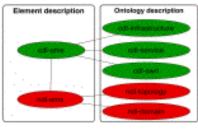

CineGrid is an initiative to facilitate the exchange, storage and display of high-quality digital media.

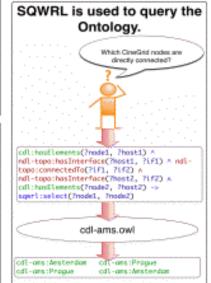

The CineGrid Description Language (CDL) describes CineGrid resources. Streaming, display and storage components are organized in a hierarchical way.

CDL has bindings to the NDL ontology that enables descriptions of network components and their interconnections.

With CDL we can reason on the CineGrid infrastructure and its services.

CDL links to NDL using the owl:SameAs property. CDL defines the services, NDL the network interfaces and links. The combination of the two ontologies identifies the host pairs that support matching services via existing network connections.

CineGrid Workflow Planner

The Ten Problems with the Internet

- 1. Energy Efficient Communication
- 2. Separation of Identity and Address
- 3. Location Awareness
- 4. Explicit Support for Client-Server Traffic and Distributed Services
- 5. Person-to-Person Communication
- 6. Security
- 7. Control, Management, and Data Plane separation
- 8. Isolation
- 9. Symmetric/Asymmetric Protocols
- 10. Quality of Service

Nice to have:

- Global Routing with Local Control of Naming and Addressing
- Real Time Services
- Cross-Layer Communication
- Manycast
- Receiver Control
- Support for Data Aggregation and Transformation
- Support for Streaming Data
- Virtualization

ref: Raj Jain, "Internet 3.0: Ten Problems with Current Internet Architecture and Solutions for the Next Generation", Military Communications Conference, 2006. MILCOM 2006. IEEE

TimeLine

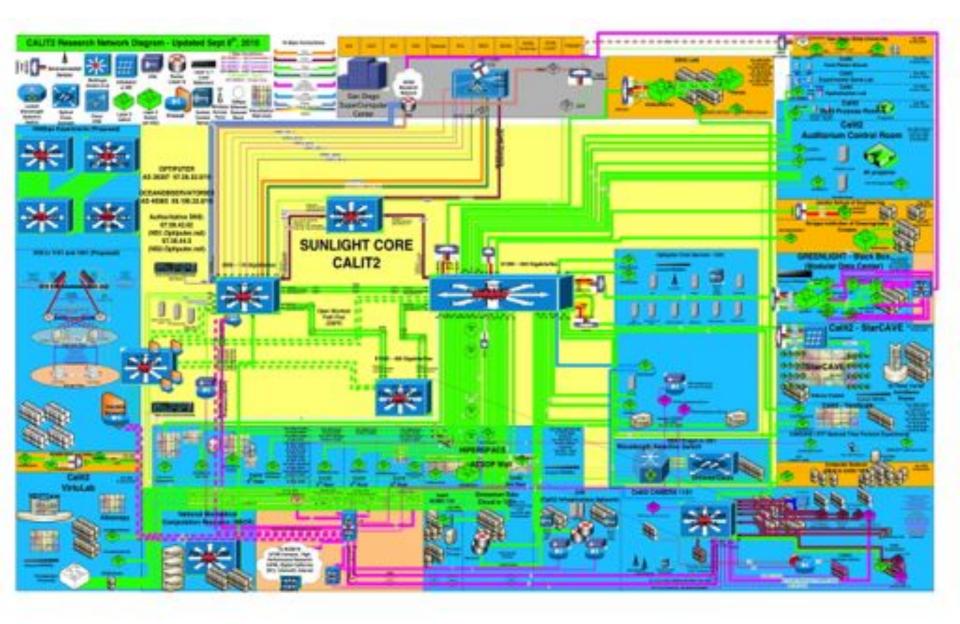

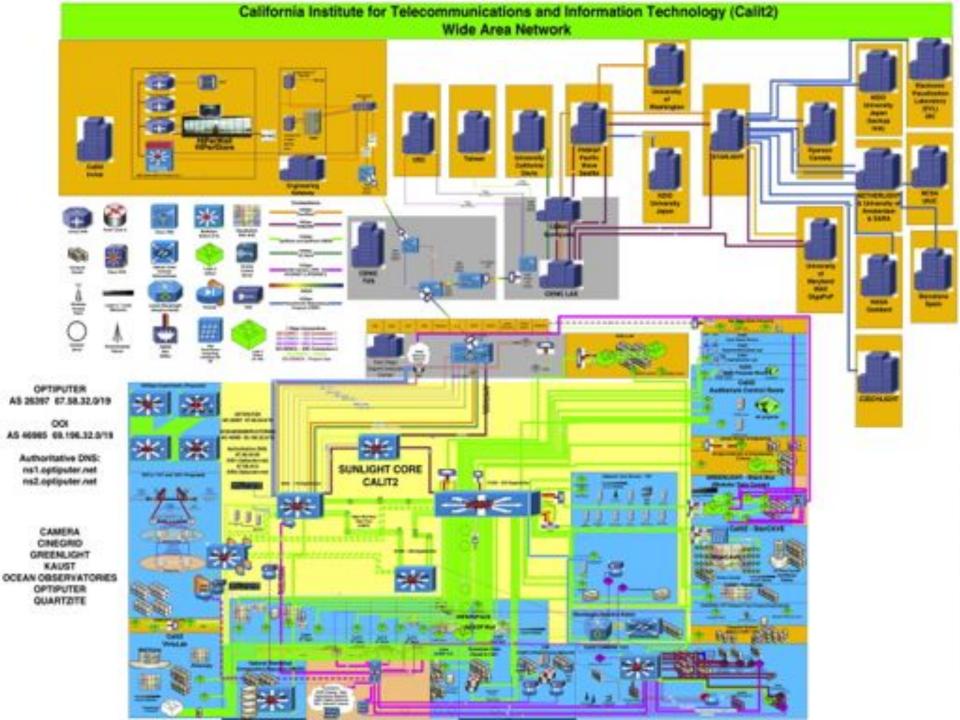

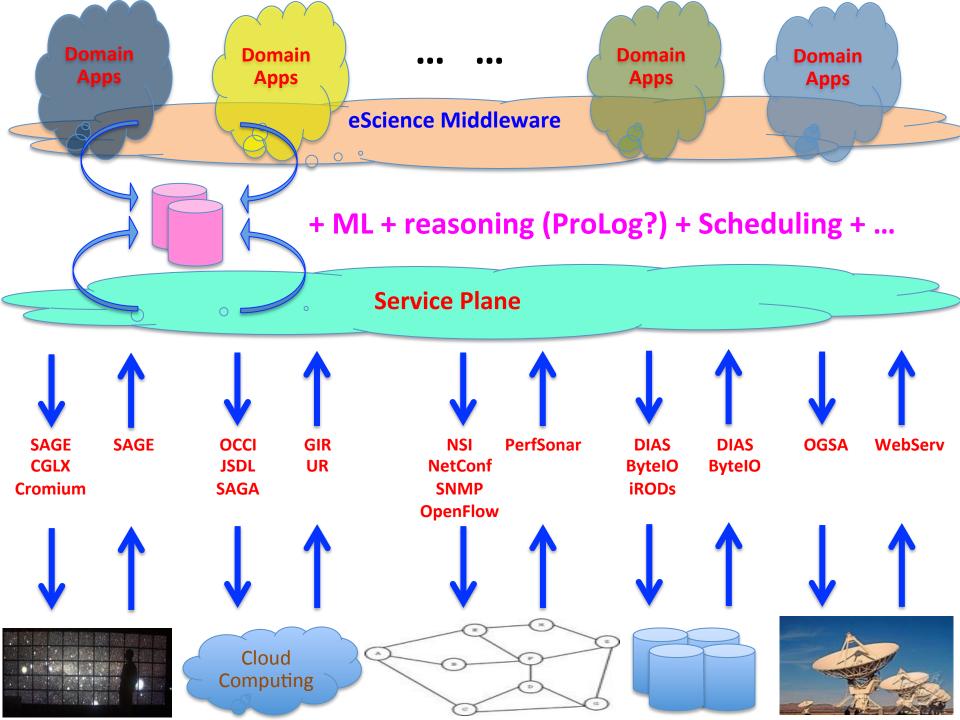

Complex e-Infrastructure!

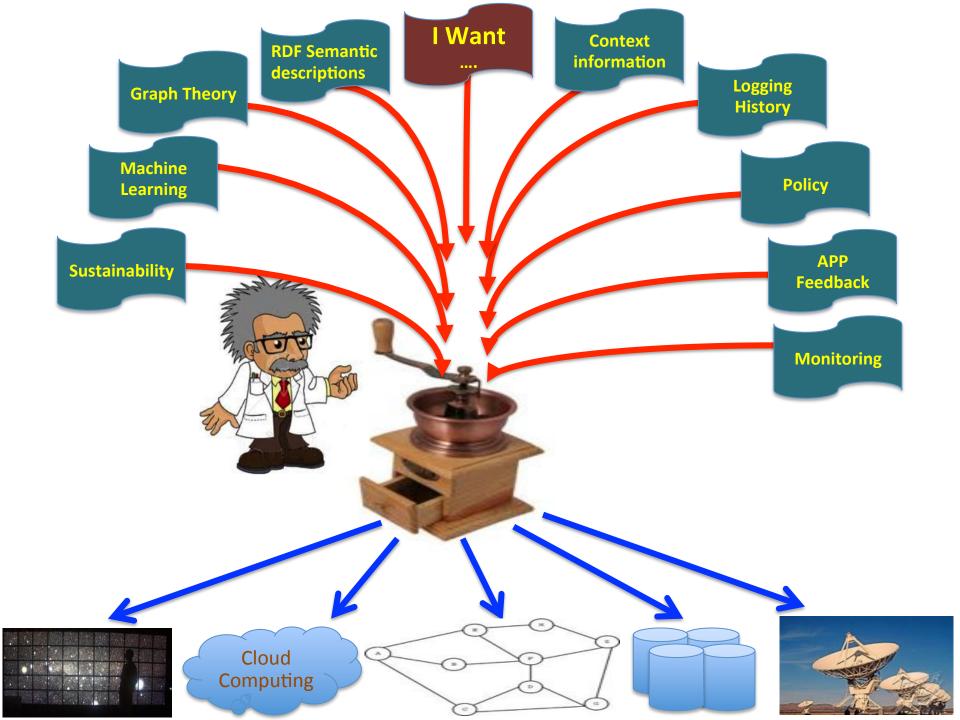

Complex e-Infrastructure!

ECO-Scheduling

Challenges

- Data Data Data
 - Archiving, publication, searchable, transport, self-describing, DB innovations needed, multi disciplinary use
- Virtualisation
 - Another layer of indeterminism
- Greening the Infrastructure
 - e.g. Department Of Less Energy: http://www.ecrinitiative.org/pdfs/ECR_3_0_1.pdf
- Disruptive developments
 - BufferBloath, Revisiting TCP, influence of SSD's & GPU's
 - Multi layer Glif Open Exchange model
 - Invariants in LightPaths (been there done that ③)
 - X25, ATM, SONET/SDH, Lambda's, MPLS-TE, VLAN's, PBT, OpenFlow,
 - Authorization & Trust & Security and Privacy

The Way Forward!

- Nowadays scientific computing and data is dwarfed by commercial & cloud, there is also no scientific water, scientific power.
 - Understand how to work with elastic clouds
 - Trust & Policy & Firewalling on VM/Cloud level
- Technology cycles are 3 5 year
 - Do not try to unify but prepare for diversity
 - Hybrid computing & networking
 - Compete on implementation & agree on interfaces and protocols
- Limitation on natural resources and disruptive events
 - Energy becomes big issue
 - Follow the sun
 - Avoid single points of failure (aka Amazon, Blackberry, ...)
 - Better very loosly coupled than totally unified integrated...
